

Variety Description

Variety

JURA

Species	White clover
Botanical name	Trifolium repens
Ploidy	2
Seeding rate	12–15 kg/ha
Distance between rows	as cereals
Sowing period	March to August
Sowing depth	1–2 cm

Agronomic figures*:

Development after sowing	5
Tendency to winterkilling	5
DM-yield total	5
DM-yield first cut	5
DM-yield in aftermath	6
Crude protein content	5
Beginning of flowering	4
Sward density	5

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

The variety JURA is recommended by the Chambers of Agriculture. It is a high-quality white clover. The prominent characteristics are high mass formation in the early development, which helps to suppress weed growth and ensure that the plant establishes well. Other advantages of the variety include even yield distribution and high protein content.

Most important characteristics

High mass formation in the early development
High yields
Even yield distribution
High protein content

Usage

Also available as coated seed [**Mantelsaat®**]!

Suitable inoculant with appropriate rhizobia for seed inoculation:
RhizoFix® RF-40
