

Variety Description

Variety

MERWI

Species	White clover
Botanical name	Trifolium repens
Ploidy	2
Seeding rate	12-15 kg/ha
Distance between rows	as cereals
Sowing period	March to August
Sowing depth	1-2 cm

Agronomic figures*:

Development after sowing	5
Tendency to winterkilling	5
DM-yield total	4
DM-yield first cut	5
DM-yield in aftermath	4
Crude protein content	5
Beginning of flowering	5
Sward density	5
Persistence	6
Resistance to diseases	6

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

The variety MERWI is a high-quality white clover. One of the prominent characteristics is a good mass formation in the early development, which helps to suppress weed growth and ensures that the plant establishes well. Other advantages of the variety include a good persistence and high protein content. MERWI is a well suited partner next to grass species in pasture mixtures for intensive grazing, helping to hold soil cover on a high level in dry vegetation periods.

Most important characteristics

High mass formation in the early development
High protein content
Good persistence

Usage

Also available as coated seed [**Mantelsaat®**]!

Suitable inoculant with appropriate rhizobia for seed inoculation:
RhizoFix® RF-40
