

Variety Description

Variety

BOMBUS

| | |
|-----------------------|------------------|
| Species | White clover |
| Botanical name | Trifolium repens |
| Ploidy | 2 |
| Seeding rate | 12–15 kg/ha |
| Distance between rows | as cereals |
| Sowing period | March to August |
| Sowing depth | 1–2 cm |

Agronomic figures*:

| | |
|---------------------------|---|
| Development after sowing | 6 |
| Tendency to winterkilling | 5 |
| DM-yield total | 6 |
| DM-yield first cut | 4 |
| DM-yield in aftermath | 7 |
| Sward density | 4 |
| Crude protein content | 4 |
| Beginning of flowering | 7 |

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

The white clover BOMBUS is the only winter-hardy ladino clover. White clovers of this type are characterised by their significantly larger leaves and are very well suited for arable feed crop production. Due to these characteristics, BOMBUS produces high yields and is an ideal ingredient in feed crop mixtures.

Most important characteristics

High-yielding and winter-hardy
Very healthy
Persistent
High protein content

Usage

Also available as coated seed [**Mantelsaat®**]

Suitable inoculant with appropriate rhizobia for seed inoculation:
RhizoFix® RF-40
