

Variety Description

Variety

REVOLVER

Species	Fodder radish
Botanical name	Raphanus sativus
Ploidy	2
Seeding rate	25–30 kg/ha as catch crop as cereals
Distance between rows	as cereals
Sowing period	from July to late August
Sowing depth	2–3 cm

Agronomic figures*:

Susceptibility to beet cyst nematodes	2
Development after sowing	6
Inclination to flower	4
Tendency to lodging	3

Clarification of figures*:

1: very early, very low / 5: medium / 9: very late, very high

Variety description

REVOLVER convinces with a good nematode reduction rate, which is confirmed by the classification of the Federal Plant Variety Office with grade 2. In addition, REVOLVER is characterized by a continuous development after sowing, which quickly leads to a dense and weed-suppressing population. The low inclination to flower makes REVOLVER an absolute top variety.

Most important characteristics

High resistance against beet cyst nematodes, grade 2
Very low inclination to flower
Extremely high mass development after sowing
Excellent weed suppression
Low tendency to lodging
