

# Variety Description

## Variety

## BARACUDA

<b>Species</b>	Fodder radish
<b>Botanical name</b>	Raphanus sativus
<b>Ploidy</b>	2
<b>Seeding rate</b>	25–30 kg/ha as catch crop
<b>Distance between rows</b>	as cereals
<b>Sowing period</b>	from July to late August
<b>Sowing depth</b>	2–3 cm

### Agronomic figures\*:

Susceptibility to beet cyst nematodes	2
Development after sowing	6
Inclination to flower	3
Tendency to lodging	2

### Clarification of figures\*:

1: very early, very low / 5: medium / 9: very late, very high

### Variety description

The BARACUDA fodder radish variety is characterised by strong early development and good nematode resistance. BARACUDA quickly achieves very good ground cover, which ensures effective weed suppression. In addition to these characteristics, the variety's high stability facilitates the shredding process.

### Most important characteristics

Good nematode reduction level  
High stability  
High mass formation after sowing  
Very good weed suppression
