

# Variety Description

## Variety

## FERIMON

Species	Hemp
Botanical name	Cannabis sativa
Seeding rate	For fibre: 300–400 plants/m <sup>2</sup> (70–80 kg/ha) For grain: 120–180 plants/m <sup>2</sup> (22–28 kg/ha)
Distance between rows	12–15 cm
Sowing period	April–May
Sowing depth	1–2 cm

## Agronomic figures\*:

Early maturity	3
THC content	2
CBD content	5
Grain yield	7
Straw yield	5
Fibre yield	5
Fibre content	5

## Clarification of figures\*:

1: very early, very low / 5: medium / 9: very late, very high

\* **Source:** Breeder information

## Variety description

FERIMON is an early maturing hemp variety characterised by its high grain yield. At the same time, it also offers good straw and fibre yields, meaning that FERIMON can also be used for secondary products (grain/straw). The fibre content of FERIMON is in the medium range. As in all hemp varieties used for this purpose, the THC content of FERIMON lies below 0.2%. Because of its good CBD content, FEDORA 17 can also be used for industrial exploitation of the substance.

## Most important characteristics

Early maturing  
THC < 0.2%  
Good straw and fibre yields  
High grain yield  
Can be used for secondary products  
CBD type

## Usage
