

# Variety Description

## Variety

## BORNEO

Species	Tall fescue
Botanical name	Festuca arundinacea
Sowing rate	30 g/m <sup>2</sup>
Sowing period	March to September
Sowing method	Broadcasting

### Key figures:

Stand	6,8
Persistence	7,0
Resistance to red thread disease	6,2
Resistance to fusarium	6,0
Resistance to leaf spot disease	6,0
Resistance to rust	6,1
Resistance to drought stress	7,1
Sward density	6,5
Quality characteristics	6,5
Leaf colour	7,0
Leaf fineness	5,5
Suitability for recreational lawns	6,0
Suitability for hard-wearing lawns	6,2
Resilience	6,2

### Clarification of figures:

1: very early, very low / 5: medium / 9: very late, very high

### \*Cultivator classification

## Variety description

BORNEO is an established variety bred in Germany. BORNEO has been used in dry lawn mixtures for many years and stands out for its durable und robust properties. BORNEO is suitable for shady and dry areas and can therefore be used for recreational and hard-wearing lawn mixtures. BORNEO is part of our standard range, with a long history of high quality.
